Human cancer

GENERAL INFORMATION¹

Gene name ¹	PYGL
Gene description ¹	Glycogen phosphorylase L
Protein class ¹	Disease related genes Enzymes Human disease related genes Metabolic proteins Plasma proteins Potential drug targets
Predicted location ¹	Intracellular
Number of transcripts ¹	3

HUMAN PROTEIN ATLAS INFORMATION¹

RNA category ¹	Consensus (human tissue):	Tissue enhanced (Liver) Detected in all
	Cell line (cancer):	Low cancer specificity Detected in all
	TCGA (cancer tissue):	Low cancer specificity Detected in all
Protein evidence ¹	Evidence at protein level	
Protein expression normal tissue ¹	Cytoplasmic expression in several different tissues, including, hepatocytes, subsets of cells in bone marrow and spleen.	

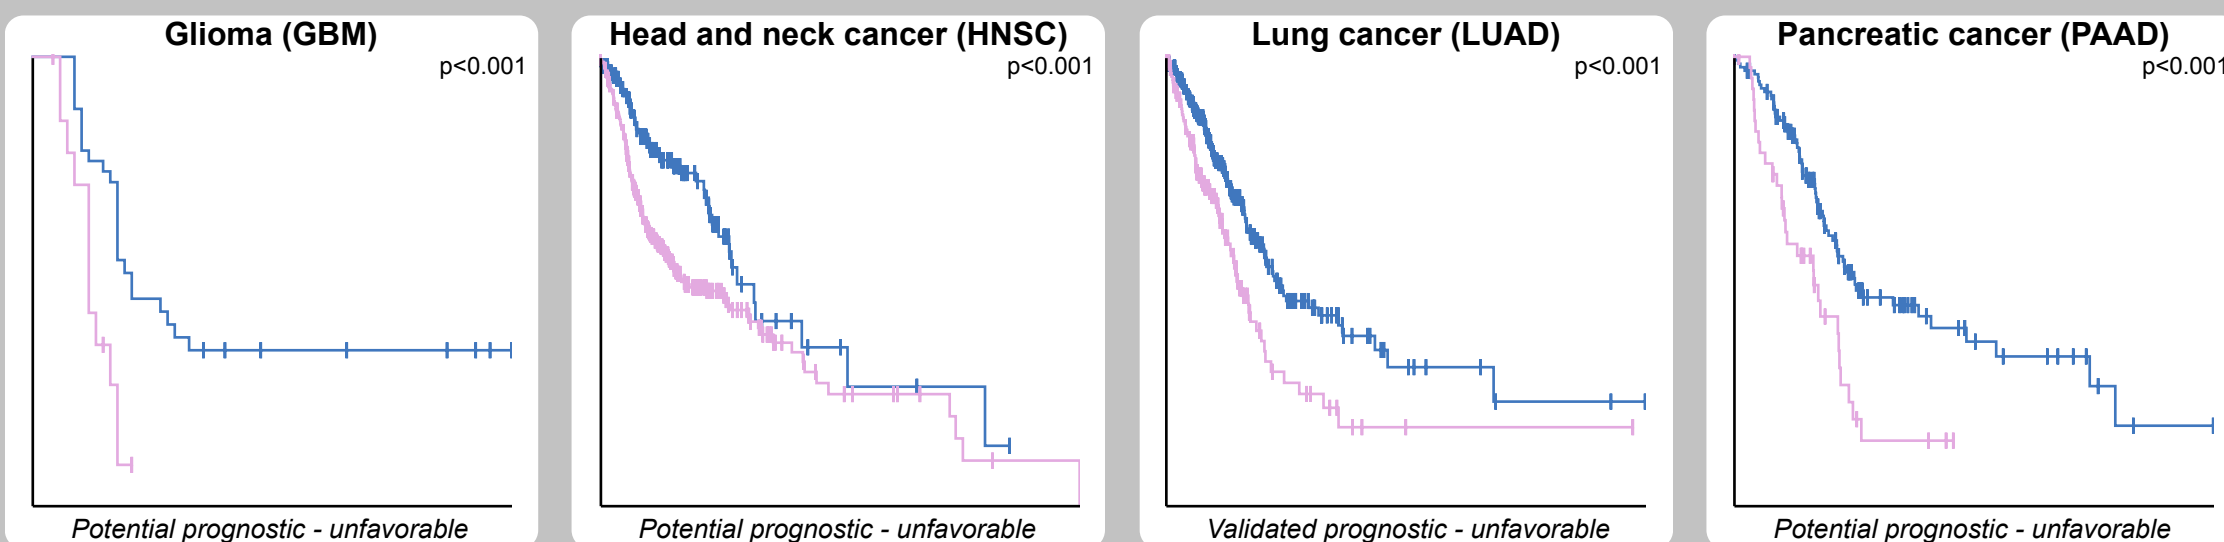

IMMUNOHISTOCHEMISTRY DATA RELIABILITY

Data reliability description ¹	High consistency between antibody staining and RNA expression data.
Reliability score - normal tissues ¹	● Enhanced
Antibodies ¹	HPA000962 , HPA004119

PROGNOSTIC SUMMARY¹

PYGL is a prognostic marker in:

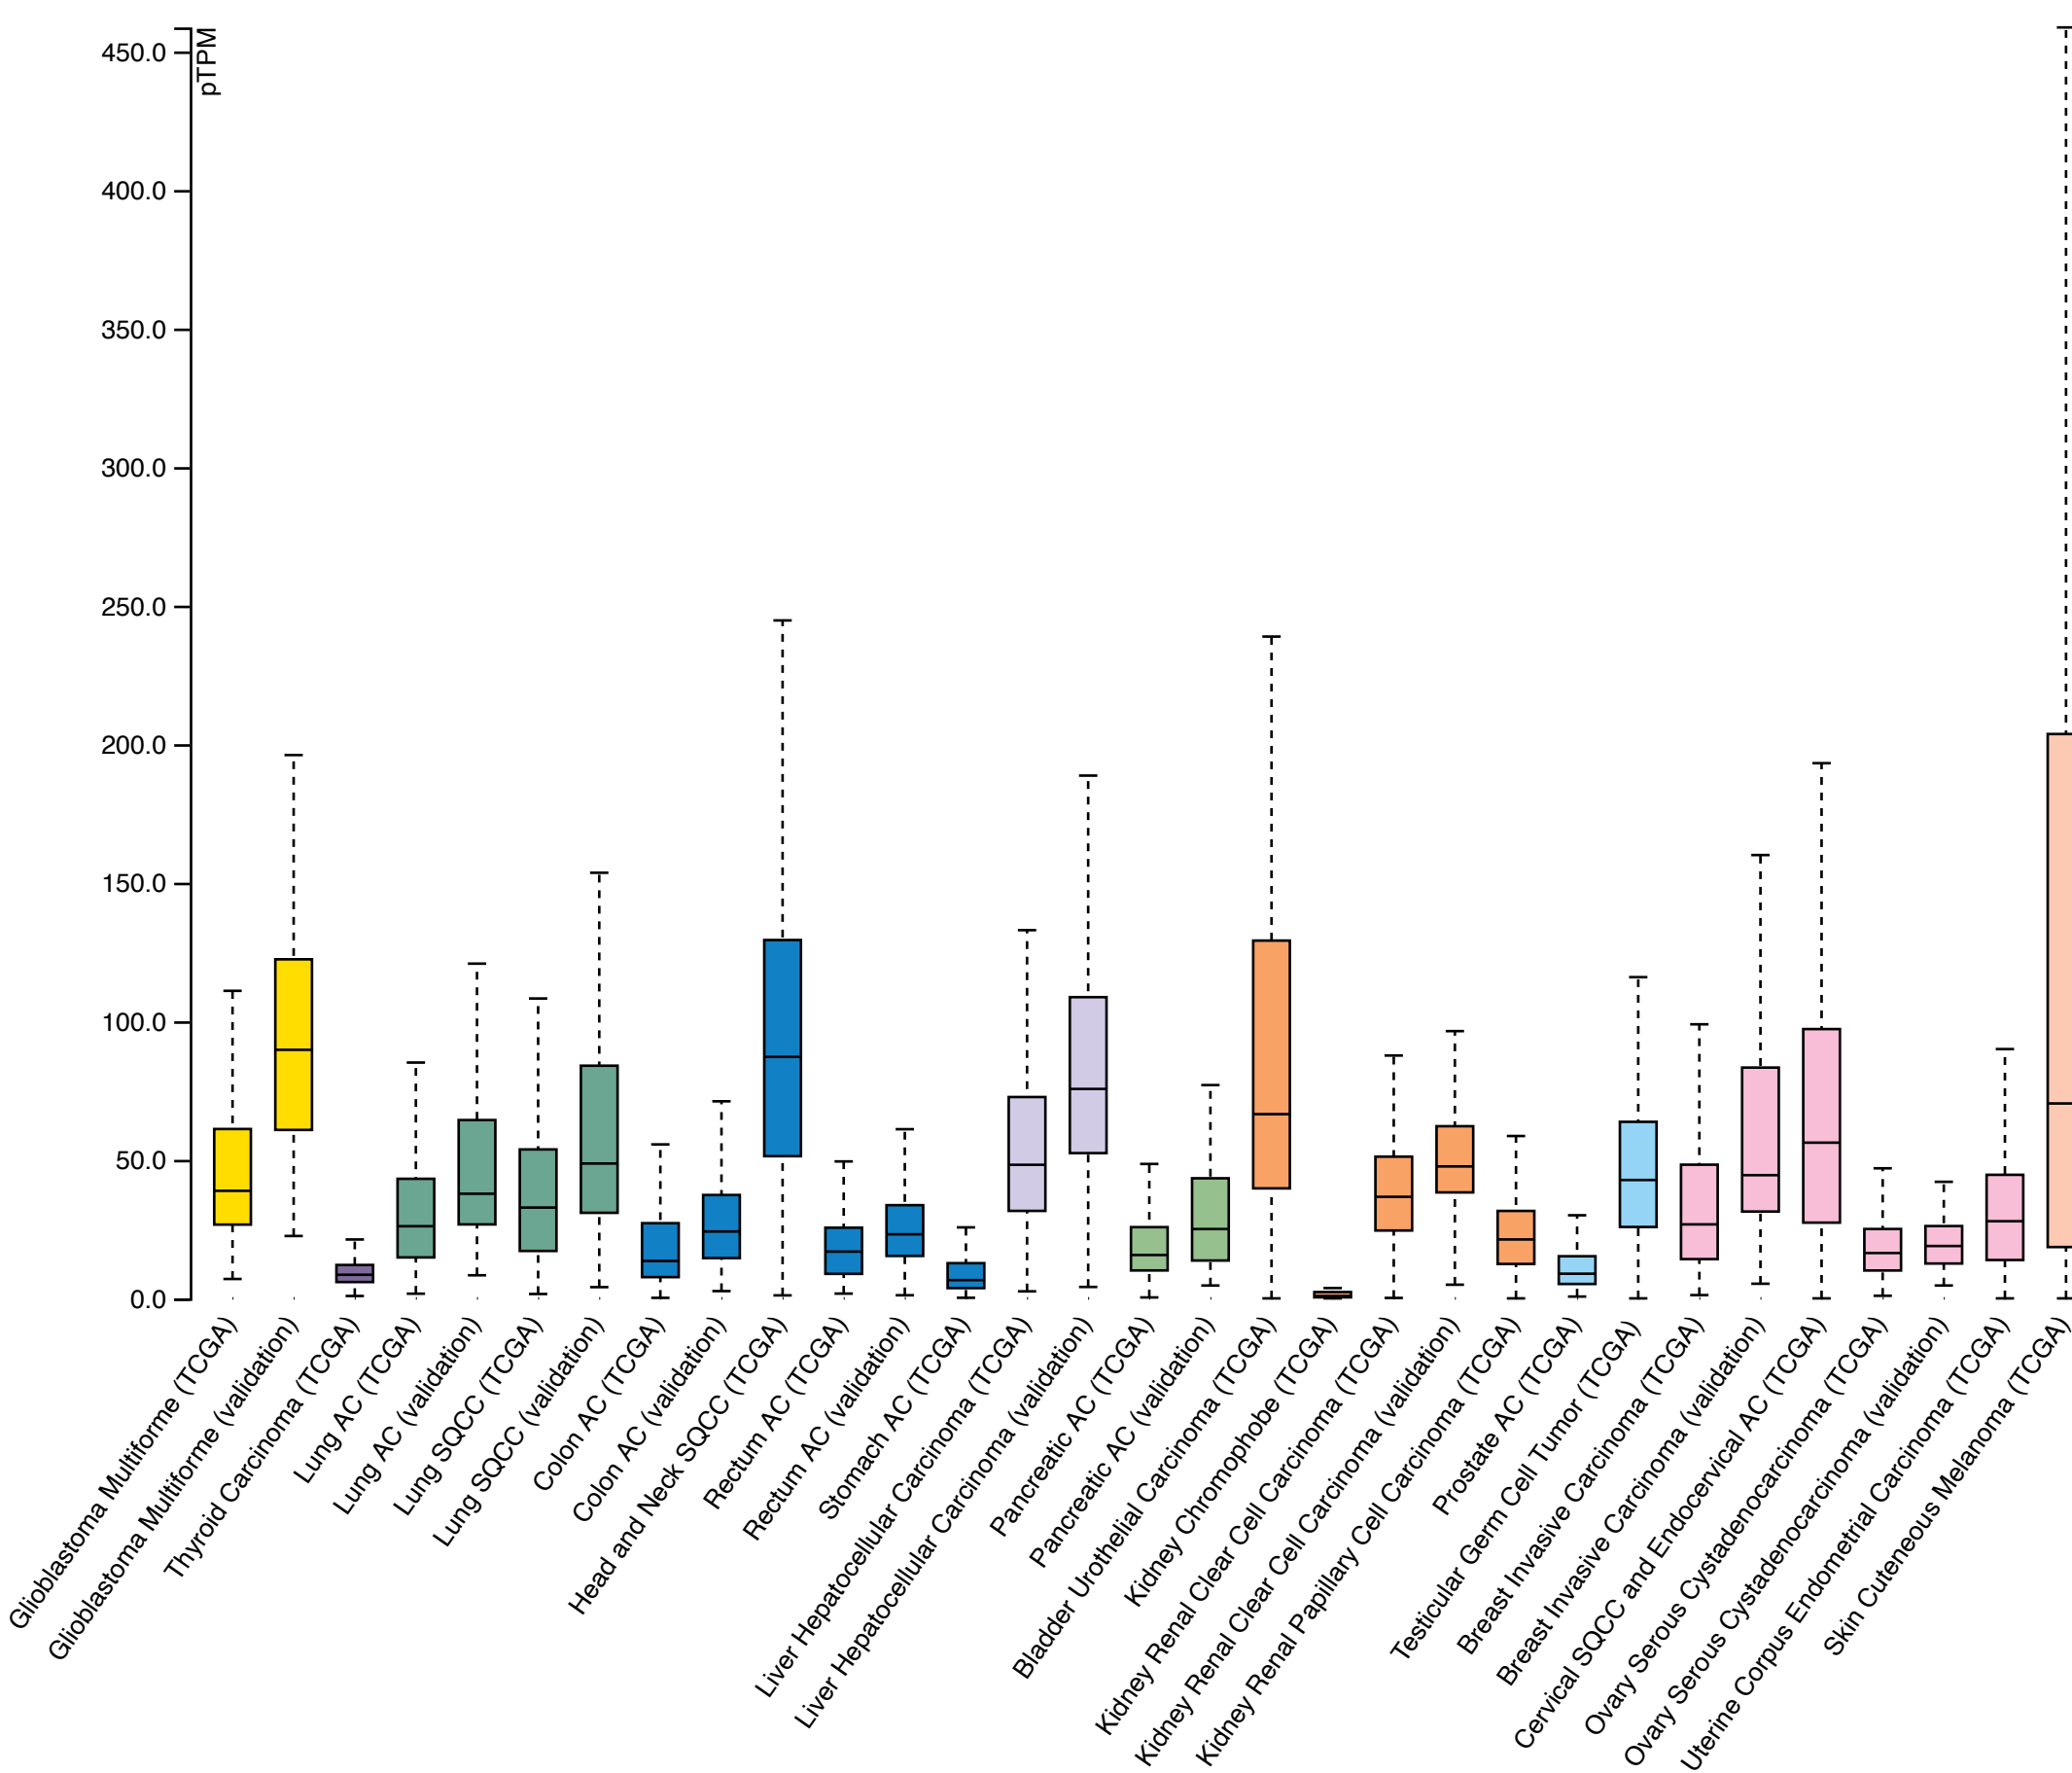

RNA EXPRESSION OVERVIEW¹

TCGA dataset¹

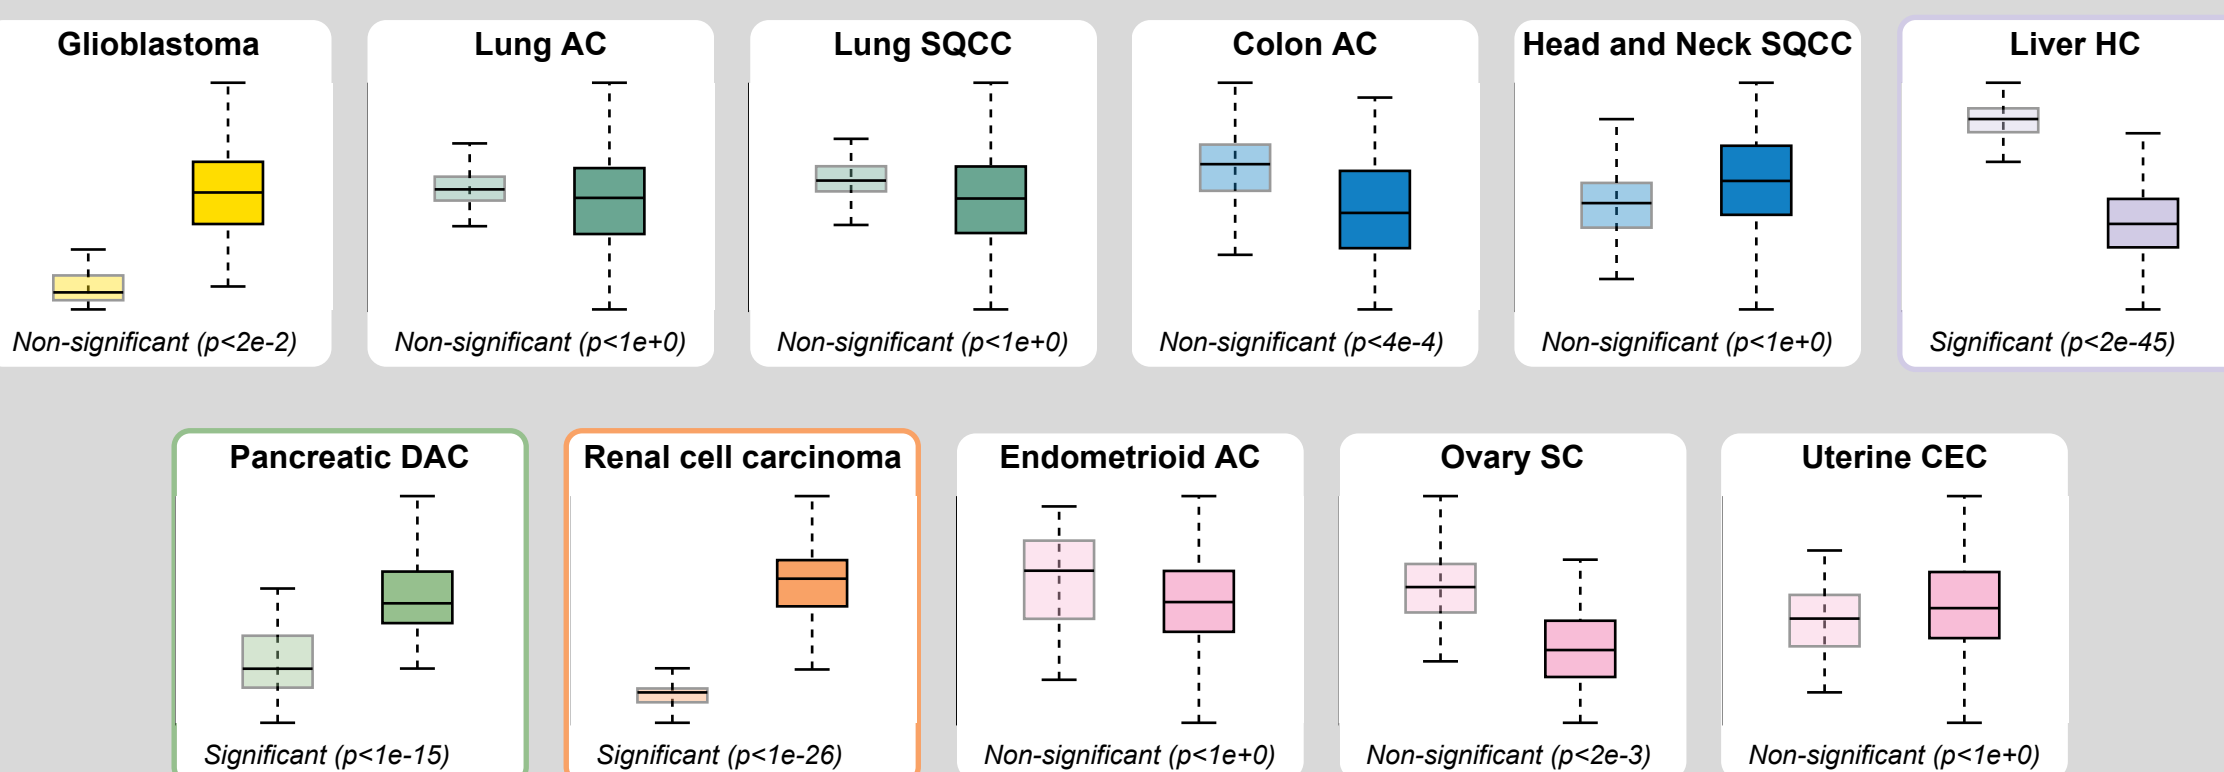

RNA cancer category: Low cancer specificity

Without outliers

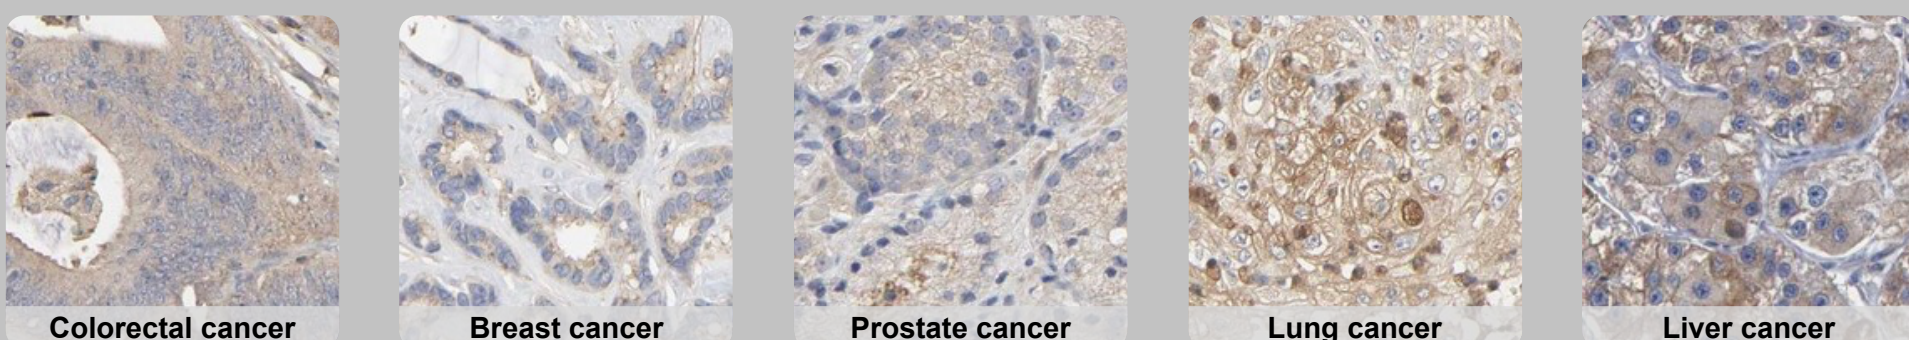

With outliers

PROTEIN EXPRESSION - MS¹

PROTEIN EXPRESSION¹

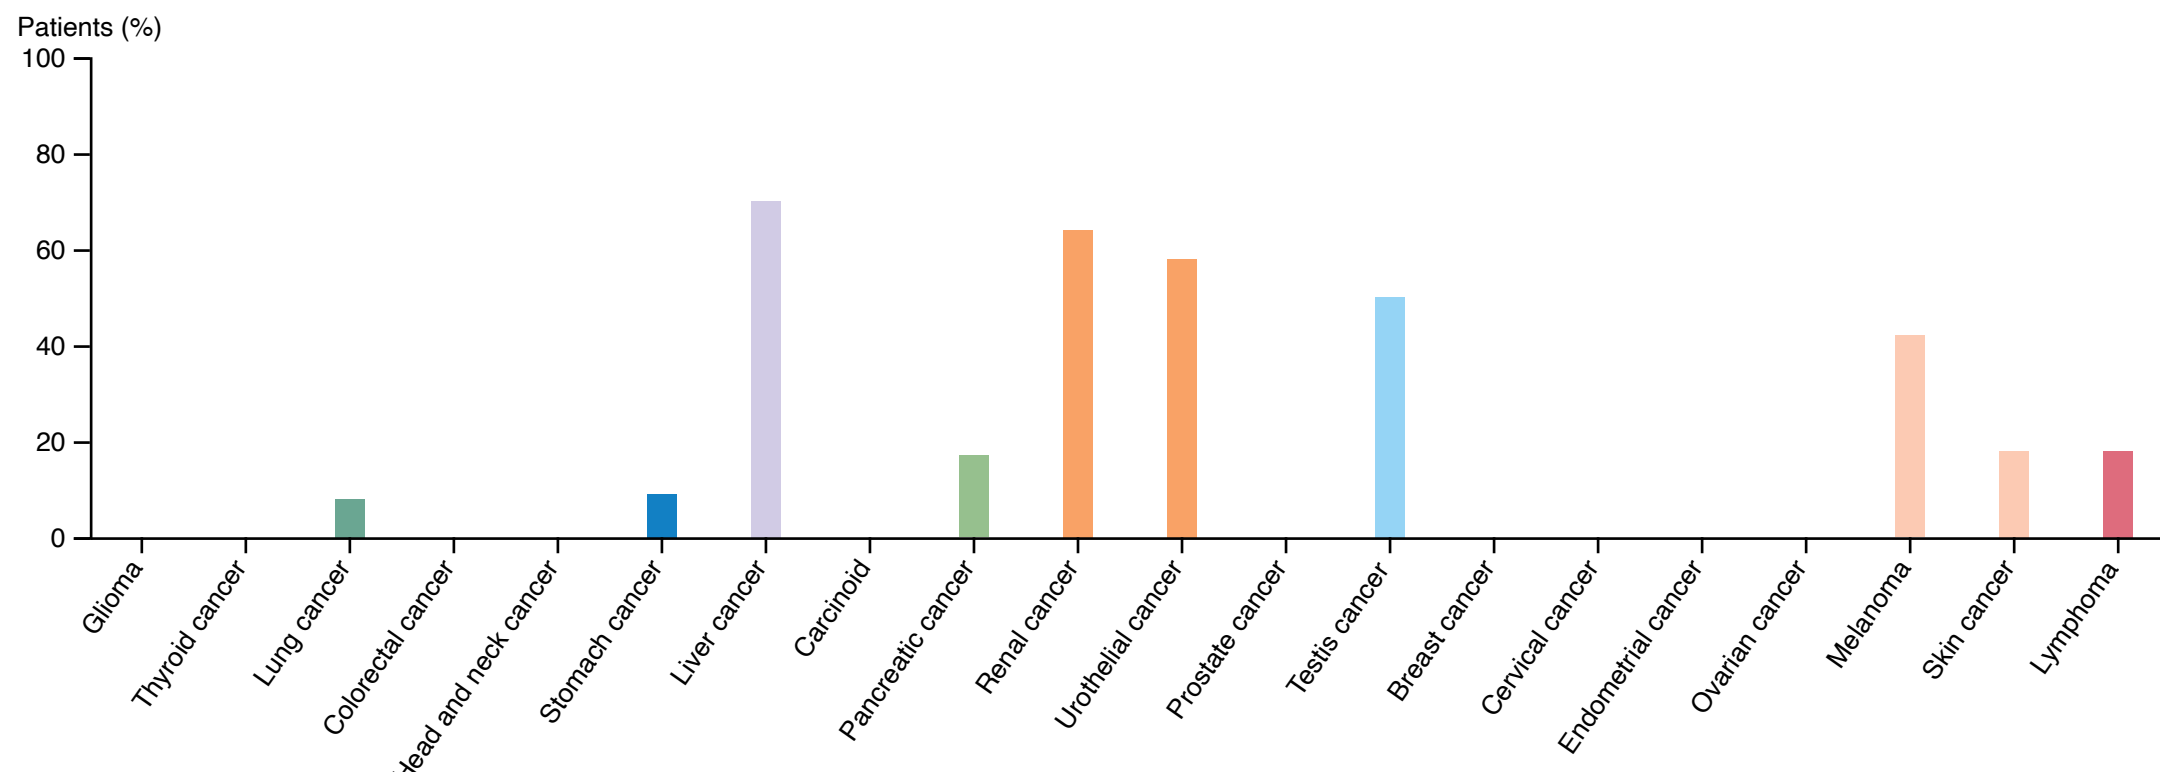

PROTEIN EXPRESSION SUMMARY¹

Organ Expression Alphabetical

HPA000962

HPA004119

Most hepatocellular carcinomas as well as a majority of renal, urothelial and testicular cancers along with several cases of melanoma showed moderate to strong cytoplasmic immunoreactivity. Remaining cancer tissues were weakly stained or negative.
